

How to build mathematical resilience and reduce maths anxiety in children aged 10-13

Actionable strategies for you to use at home in a Covid-19 world.

Tuesday, November 24th 2020 @ 8:00PM GMT

This is a session available to parents across the UK and will be delivered by Craig Barton and Rachel Kidson, who are both maths teachers and authors. As this is being run by a third party we have included below the introductory wording from the organisers themselves:

Have you noticed a drop in your child's confidence since Covid-19 led to school closures? Do you find that helping your child with their maths homework often results in tears and tantrums? Has your child ever said that they're "not a maths person" or "won't ever understand"?

With school closures interrupting learning earlier this year, 'maths anxiety' is all the more likely in this crazy world we're all getting used to.

In this session, you'll learn: What 'maths anxiety' means, practical strategies to help your child deal with maths anxiety and actionable tips to help your child build up their mathematical resilience

We hope that some parents will find this useful. Please use the link below to sign up for the session.
